DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solomon.

US patent no. 6,011,801 (Solomon) discloses Rate control of channels on a TDM bus, comprising system for receiving and processing HDLC frames on a time division multiplex PCM type link (col 2 lines 6-14, col 7 lines 6-7, comprising a circuit arrangement for receiving data arranged in a transmission frame (circuit arrangement) whereby different time slot widths on a same transmission link can be configured within the transmission frame comprising a first processing device (Processing device including FIFO 83) for readout from a current time slot and different current state parameters of the current time slots for intermediary storing state parameters of a time slot following the current time slot and for intermediary storing readout data of the time slot in a first memory unit (current time slot is temporarily stored in FIFO memory 83), a second processing device (processing device including FIFO 104) with an allocation unit for administering a second memory unit (FIFO 104) in which said state parameters read from

Art Unit: 2661

the first memory unit given a time a slot change are stored for editing the state parameters intermediary stored in the first memory unit (values are continuously compared to registers pre configured with of time slots assigned) and for allocation of the data of the current timeslot intermediary stored in the first memory unit into a third memory unit (FIFO 112) and a third processing device for forming data words from the data deposited in the third memory unit (processing device including FIFO 112), as in claim 8-9.

Solomon did not specifically disclose a first, second and third processing unit, however Solomon disclosed a first processing device such as one including FIFO 83, register 71 and counter 79, a second processing device including FIFO 104 together with counter 97 and register 93, a third processing device including FIFO 112 and register 93.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to that said devices would have been able to process data with the motivation of obtaining a method and apparatus for controlling flow information from either end of a bidirectional or full duplex TDM bus.

Allowable Subject Matter

2. Claims 10-11 are allowed.

Conclusion

3. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection. A second non-final is being issued.
